# **Exceeding Expectations**

Hayek Group s.a.r. I (HG), headquartered in Beirut, Lebanon, has been providing professional engineering and construction services since 1951. HG has extensive experience providing our Clients with construction advisory and management services from initial conception through final completion of projects. HG primarily serves clients in the residential, commercial, government/public sector, touristic, infrastructure, Oil, Gas and transportation market segments.

HG was founded on the concept that there was a better way to provide professional construction services beyond what the traditional market has to offer. The principals of HG are steadfast in their belief that these services can be provided while always being an advocate for the Client throughout the design and construction process.

Different choices are offered to clients so why HG? Because of our ability to offer regional experience delivered on a much more personal level. HG has worked for some of the largest construction companies and developers, therefore serving clients with certified experience rarely found.

HG do not chase every project that comes along; our target are those projects of which we have similar experience, as well as highly qualified and available staff.

HG may not be the prevalent, but we certainly strive to be the very best - exceeding expectations and avoiding surprises.

Sincerely,

Abdallah Hayek President, Hayek Group
